Seattle, WA

Recent Computer Science graduate with experience in software architecture, backend, and full-stack development. I enjoy tackling complex technical challenges in collaboration with a team. My strongest asset is my ability to learn new skills on the spot. I have been coding since age 14, and I'm excited to bring my long-standing passion for computing into my professional career.

TECHNICAL PROJECTS

Kanban Website: A simple kanban application showcasing full stack development.

- Simple React frontend, built with Vite.
- Served on an Nginx server through a Cloudflare tunnel.
- Backend built in Golang-Gin using a Postgres database.
- Secured authentication service with properly hashed password storage using Bcrypt.
- Fully automated development/production deployments using Docker compose.
- Currently in development. [Github](#) - [Website](#)

Ad Collector (Privacy Research): Collecting Ad metadata to increase user privacy.

- Built to automatically collect tracking and advertising data on the browser to support privacy studies.
- Uses a simple job specification through JSON to perform experiments.
- Built using Javascript with the Chrome extension API.
- Built for users to allow researchers to collect and study the advertisements they see.
- Data collected is now involved in a research study and associated paper.

EDUCATION

Western Washington University | Bellingham, WA

Graduated March 2025

B.S. in Computer Science (ABET accredited) | GPA: 3.78/4.0

TECHNICAL SKILLS AND INTERESTS

Programming Languages: Javascript/Typescript, Java, Golang, Python, C, SQL, Bash.

Frameworks and Tools: ReactJS, MongoDB, PostgreSQL, Node.js/npm, Linux, Microservices and Monolith architectures, Monorepos, AWS Services (EC2, DynamoDB, S3), Spring, Docker.

PROFESSIONAL EXPERIENCE

Manufacturing Engineering Technician - Software, Emerson, Wenatchee Wa

June 2025 - July 2026

- Direct the construction of 23 high precision testing consoles.
- Design and validate the electrical validation process to ensure an electrical precision of higher than a total error band of 0.0125%.
- Build automated testing tools to support console data acquisition, testing, and construction using Python 3, Pyvisa, and the Textual framework to communicate directly with high precision temperature and electrical control instruments.
- Build scripting to support HR functions by verifying PTO accrual systems using Python 3 through an enterprise time management system API.
- Utilize AWS EC2 to test AI application viability for document sorting, with preliminary testing achieving 99% accurate document categorization.
- Assist IT with network upgrades including installing firewalls, configuring routing, and configuring internet connections to achieve proper segmentation.

Computer Science TA, Western Washington University, Bellingham, Wa

Apr 2024 - Dec 2024

- Assist students with low programming knowledge in understanding technical concepts.
- Present highly technical information in a digestible manner.
- Review and provide feedback on complex coding assignments.
- Automated grading for 100+ assignments using Python and Bash scripts.
